

STRUCTURE PLANE

Information architecture

Will be a simple structure of the page

Interaction design:

Home page is the first contact with the user, they can Register/Login and access fully website. Navigation bar include links to Home, Antiques shop, Register, Login and Cart. Once the user Login to the website, the navigation bar hides Registration and Login and shows only Logout.

On mobile and tablet devices the navigation bar is at the top of the right as a hamburger icon. Once is pressed the navigation links will show as a dropdown. Each link is displayed in block and when hovered over will highlight.

Navigation bar including search option and it is displayed on each page.

Home page has extra link option that the user can press and will be transferred to Antiques page. The content of home page is kept to minimum to make clean and well organised design.

Antiques page includes link to contact us page where user can send any queries regarding products/website or any other which user may want to ask or need help with, once submitted will be transferred to Home page. Each

product is displayed using cards, which showing each product separate. Each product is displayed with image, name, description and price. Once user will add product to cart, on the navigation bar automatically will show number of item next to Cart link.

The next link user see is Register link. Page has option to go to login page in case they are already registered. On the page user can register with the website. Once the user press register button it will be transferred to Antiques page.

The next link is Login link. User can use this link once he/she is registered with the website. Once the user will press login will be transferred to Antiques page.

When user will login to the website the Register and Login links are hidden and Navigation bar will show only Logout link, which once pressed will be moved to Antiques page (with message displaying 'You are now logged out!') and will show back Register and Login links.

The last link is Cart link. Its displaying shopping cart with button 'checkout' which is link to checkout page. Under checkout button user can see the items which they are added to the basket. Each product is displayed the same as on Antiques page.

Checkout page is page where user can purchase the items they choose. It displays only the number of items and total price which needs to be paid. Under the total user can see payment details. Once the user will fill up the form and press checkout the will be moved to Antiques page and will see message 'You have successfully paid, your order is now being processed'
